EDUCATION

M.S., Data Science, Analytics & Engineering [EE] (GPA : 3.78/4.00) Arizona State University	Graduating Dec 2026 Tempe, Arizona
B.E., Electronics & Telecommunication Engineering (GPA : 3.71/4.00) S.I.E.S. Graduate School of Technology	Aug 2020 - Jun 2024 Mumbai, India

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java
Machine Learning: PyTorch, TensorFlow, Deep Learning, Neural Networks, deep neural networks
NLP / LLMs: Hugging Face Transformers (FinBERT), LangChain, GraphRAG, NER
Visualization / DevOps: Tableau, Power BI, D3.js, Docker, Flask, Git, Linux

PROFESSIONAL EXPERIENCE

Google Developer Student Clubs S.I.E.S. GST ML & Data Science Coordinator	Mumbai, India Jul 2022 - Apr 2024
- Orchestrated a 10-week machine learning curriculum for 150+ students, managing technical labs and mentors to bridge the gap between theoretical concepts and industry-standard deployment practices. - Directed cross-functional student teams through the end-to-end ML lifecycle using PyTorch and TensorFlow, resulting in a 15% increase in project completion rates via streamlined internal workflows.	
Help for Coders SEO Intern	Mumbai, India Dec 2021 - Apr 2023
- Built a cohort analysis pipeline in Python using Google Analytics data to surface underserved content gaps; findings drove a 25% increase in organic traffic and 15% engagement lift within six months. - Automated weekly ranking and traffic reports in Python; implemented validation checks for incomplete data and tracking errors before distribution to non-technical stakeholders.	
S.I.E.S. Graduate School of Technology Image Processing & Machine Learning Intern	Mumbai, India Jun 2022 - Jul 2022
- Diagnosed failure cases in an object detection pipeline and tuned normalization, cropping, and augmentation parameters in Python, improving held-out performance by 10% and reducing label noise in review. - Addressed class imbalance in a credit card forgery dataset by benchmarking sampling strategies and tree-based classifiers, selecting a final model with an F1 score of 0.92 aligned to product risk thresholds.	

PROJECTS

Smart Team Manager	Feb 2026 – Mar 2026
- Accomplished zero-latency real-time collaboration for distributed teams by implementing Yjs CRDTs and WebSockets in Go, ensuring 100% data consistency across 50+ concurrent user sessions in testing. - Increased deployment scalability by architecting a container-first system using Docker and Kubernetes, incorporating an AI-driven subtask generator to automate project breakdown via LLM integration.	
AstraNode: AI Research Intelligence	Oct 2025
- Achieved citation-grounded research synthesis over 600+ NASA papers by developing a GraphRAG system with Neo4j, surfacing hidden cross-mission connections previously inaccessible via keyword search. - Ranked as the Arizona Regional Winner and Global Nominee by delivering an interactive D3.js knowledge graph, reducing research discovery time for complex scientific queries by an estimated 40%.	
Advanced Text Analyzer	Aug 2025 - Sep 2025
- Improved sentiment detection accuracy for financial domain text by fine-tuning a FinBERT pipeline with agentic workflows, unifying 10,000+ disparate records from CSV/JSON sources for analysis. - Facilitated data-driven prioritization by deploying a Flask REST API and React/D3.js dashboard, providing stakeholders with traceable sentiment trends and severity metrics with 95% reporting precision.	

AWARDS & HONORS

Winner & Global Nominee - NASA International Space Apps Challenge	Oct 2025
Patent - Multilayer Microstrip Aerial Transmitter Receptor for Wi-Fi Applications	Apr 2024
